

The best way, to disable menu register

1. Web.php

Change Auth::routes(['register' => true]); to be Auth::routes(['register' => false]);

```
Route::get('/', function () {
    return view('welcome');
});

Route::get('/home', [App\Http\Controllers\HomeController::class, 'index'])->name('home');

Route::resource('user', 'UserController');
Route::resource('permission', 'PermissionController');
Route::resource('role', 'RoleController');

Route::post('/profile', 'UserController@postProfile')->name('user.postProfile');
Route::get('/password/change', 'UserController@getPassword')->name('userGetPassword');
Route::post('/password/change', 'UserController@postPassword')->name('userPostPassword');

Auth::routes(['register' => false]);

// axios request
Route::get('/getAllPermission', 'PermissionController@getAllPermissions');
Route::post("/postRole", "RoleController@store");

Route::get('/cobaUnitTest', function () {
    return 'Judul Blog';
});

// e-Mail
Route::get('/ kirim-email', 'EmailController@index');
Route::get('/inbox', 'EmailController@inbox');
```

2. Terminal

Writes command

php artisan route:cache

php artisan route:clear

```
PS C:\xampp\htdocs\surat> php artisan route:clear
Route cache cleared!
PS C:\xampp\htdocs\surat> php artisan route:cache
Route cache cleared!
Routes cached successfully!
```

3. login.blade.php

change code

```
<p class="mb-0">
    <a href="{{route('register')}}" class="text-center">Buat Akun Baru</a>
</p>
```

to be

```
{{-- <p class="mb-0">
    <a href="{{route('register')}}" class="text-center">Buat Akun Baru</a>
</p> --}}
```

```
{{-- <p class="mb-0">
    <a href="{{route('register')}}" class="text-center">Buat Akun Baru</a>
</p> --}}
```
